

Table J-2. DOE responses to comments on Draft EIS (continued)

Comment number	Comments	Responses
<p style="text-align: center;">TESTIMONY OF DIANE MAHONEY, APRIL 30, 1986, BEFORE THE ALTERNATIVE COOLING WATER DRAFT EIS PUBLIC HEARING</p>		
AJ-1	<p>I have just one single question that I hope someone here can answer. Where does P-Reactor fall in all of this, and why has it been excluded in your consideration of cooling water alternatives? Specifically, can you tell me where ponds 1 through 4, and pond C fall in all of this? Is there someone who is supposed to answer my question, or ?</p>	<p>As stated on page 1-1 of Chapter 1 of the DEIS, discussions of P-Reactor are not within the scope of this EIS. This is because continued use of the recirculating cooling system for P-Reactor was approved by SCDHEC on May 14, 1987, based on Section 316(a) and 316(b) studies conducted by DOE which demonstrated the existence of a balanced biological community in Par Pond.</p>
